# Can you get more out of your services?

RouteFinder is an extension to MapInfo Professional that allows you to work with road network data to plan resources and manage services efficiently.

Service Planning

Use RouteFinder to explore and understand the impact of change within your services.

Are there gaps in my service coverage?

RouteFinder's Drive Time analysis tools help you understand catchments in detail - for example how many people fall within your service areas using time or distance. It highlights issues such as accessibility to services and assets.

Where are the best places to locate my resources?

RouteFinder provides a valuable evidence base to support key decisions about the optimum location of assets and resources. Projects like estates rationalisation and territory assignment for field teams are made much easier.

Make your network even more accurate by applying your own GPS speeds

Use RouteFinder's new feature to assign collected GPS speeds to individual road links. This enables greater tailoring of the network based on time of day, type of vehicle or particular situation - for example, emergency vehicles.

Understand the potential with RouteFinder

Scenario Modelling

What's the impact of proposed interventions?

Ensure business continuity by analysing how routes and service areas would be affected by, road closures and simulated traffic via slower road speeds to produce suitable plans for your teams.

Integration

### Can I use the data I collate in RouteFinder in other applications?

Yes, we can help you can make the most of your RouteFinder data by integrating it into other services in your organisation. For more information, get in touch.

Routing and ad-hoc planning

What's the most efficient way for my team members to visit people in our service areas?

RouteFinder can calcultate optimum routes for you based on time or distance between a series of locations and even account for delay at each stop - for example, care visits or maintenance calls.

This makes your field teams time and cost efficient, ensuring that you get the best from your resources.
